

PORTFOLIO – KAGO MMAPETLA

...

PROFESSIONAL WORK

Confidential (some information omitted)

1. An integrated dashboard made for a client as explained in the resume. Integration because it is a final product I ended up with. It encapsulates two other surveys with their own dashboards, monthly data from SAP system and one other dashboard with static data.

An 'Integrated Dashboard' for a client

This is a final live & interactive dashboard made for a client to track several Vendor(Suppliers') KPIs

Summary

As seen on the left sidebar, the dashboard consists of;

- Seven (7) reports, 6 focusing on detailed analysis customized to client's need and
- One (1) giving an overview of the dashboard.
- External links; these are the other 2 external dashboards included in the integration.

2. Jobs Impact demo

An example of a detailed report from Jobs Impact dashboard

Description:

This is an individual dashboard made after conducting a Survey which involved 900 suppliers and had 602 respondents after data validation & cleanup.

It consists of several customized reports each tracking their own KPIs.

The dashboard is later used as part of integration.

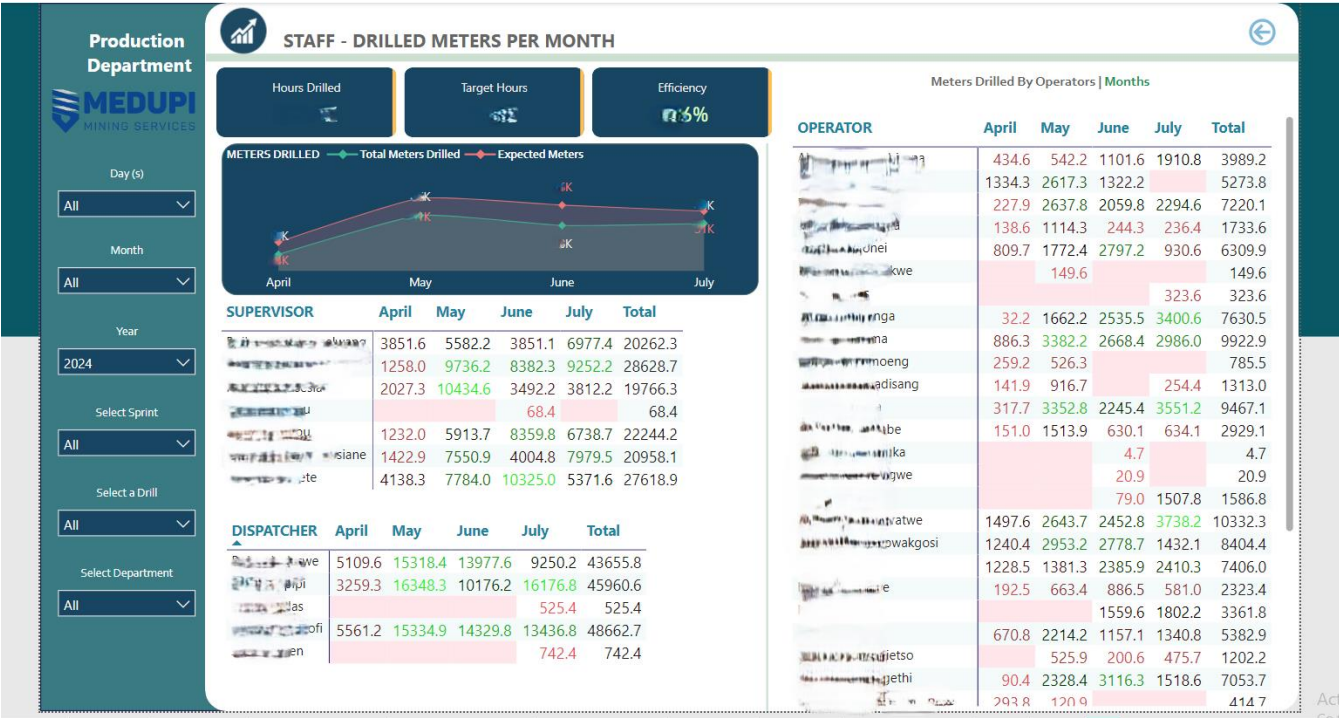

2. Digital Transformation of a Mining Services company
This is the Directors view dashboard made for another client also as explained in the resume; it has several other pages on the left menu justifying the data. The entire project has reports for each department. Several data sources are brought together to make this possible.

a. Confidential (some information hidden)

Below is one of the analysis pages (from the left navigation above) showing staff performance gaps:

The next 2 screenshots are demonstration apps for one of the departments from above.

PERSONAL WORK

- a. A personal project I made on asylum seekers originating from Botswana. Data is obtained from online international sources due to absence of local information.

- b. Another personal project analyzing past Botswana political party data. Getting this data involved coming up with a Python script that crawled given Wikipedia page and collected data, saving it as an excel or CSV before feeding into Power Bi for analysis.
